The Witches' Almanac 2021-2022 Standard Edition Theitic 2020-11-05 Founded in 1971 by Elizabeth Pepper, the art director of Gourmet magazine for many years, The Witches' Almanac is a witty, literary publication that appeals to general readers as well as hard-core Wiccans. At one level, it is a pop reference that will fascinate anyone interested in folklore, mythology, and culture; but at another, it is the most sophisticated and wide-ranging annual guide available today for the mystic enthusiast.

Modeled after the Old Farmers' Almanac, it includes information related to the annual Moon Calendar (weather forecasts and horoscopes), as well as legends, rituals, herbal secrets, mystic incantations, interviews, and curious tales of good and evil. Although it is an annual publication, much of the content is both timely and timeless—non-specific to the date range of each issue. The theme of Issue 40 (Spring 2021–Spring 2022) is "The Sun—Rays of Hope."

The following articles are also included: "Mithras: Comrade of the Sun, Savior of Soldiers" "Tell the Bees" "Exploring and Embracing the Fluid Gender and Sexuality of Witch-Gods" "Bringing Fairies Back to Your Home" And much more

Solar Radiation Daryl Ronald Myers 2017-07-12 Written by a leading scientist with over 35 years of experience working at the National Renewable Energy Laboratory (NREL), *Solar Radiation: Practical Modeling for Renewable Energy Applications* brings together the most widely used, easily implemented concepts and models for estimating broadband and spectral solar radiation data. The author addresses various technical and practical questions about the accuracy of solar radiation measurements and modeling. While the focus is on engineering models and results, the book does review the fundamentals of solar radiation

modeling and solar radiation measurements. It also examines the accuracy of solar radiation modeling and measurements. The majority of the book describes the most popular simple models for estimating broadband and spectral solar resources available to flat plate, concentrating, photovoltaic, solar thermal, and daylighting engineering designs. Sufficient detail is provided for readers to implement the models in assorted development environments. Covering the nuts and bolts of practical solar radiation modeling applications, this book helps readers translate solar radiation data into viable, real-world renewable energy applications. It answers many how-to questions relating to solar energy conversion systems, solar daylighting, energy efficiency of buildings, and other solar radiation applications.

The Carbon Almanac The Carbon Almanac Network 2022-07-12 When it comes to the climate, we don't need more marketing or anxiety. We need established facts and a plan for collective action. The climate is the fundamental issue of our time, and now we face a critical decision. Whether to be optimistic or fatalistic, whether to profess skepticism or to take action. Yet it seems we can barely agree on what is really going on, let alone what needs to be done. We urgently need facts, not opinions. Insights, not statistics. And a shift from thinking about climate change as a "me" problem to a "we" problem. The Carbon Almanac is a once-in-a-lifetime collaboration between hundreds of writers, researchers, thinkers, and illustrators that focuses on what we know, what has come before, and what might happen next. Drawing on over 1,000 data points, the book uses cartoons, quotes, illustrations, tables, histories, and articles to lay out carbon's impact on our food

system, ocean acidity, agriculture, energy, biodiversity, extreme weather events, the economy, human health, and best and worst-case scenarios. Visually engaging and built to share, The Carbon Almanac is the definitive source for facts and the basis for a global movement to fight climate change. This isn't what the oil companies, marketers, activists, or politicians want you to believe. This is what's really happening, right now. Our planet is in trouble, and no one concerned group, corporation, country, or hemisphere can address this on its own. Self-interest only increases the problem. We are in this together. And it's not too late for concerted, collective action for change.
