**Boosting Farmer Incomes** Ashok Gulati

2021-03-05 This open access book provides an evidence-based roadmap for revitalising Indian agriculture while ensuring that the growth process is efficient, inclusive, and sustainable, and results in sustained growth of farmers'

incomes. The book, instead of looking for global best practices and evaluating them to assess the possibility of replicating these domestically, looks inward at the best practices and experiences within Indian states, to answer questions such as -- how the agricultural growth process can be speeded up and made more inclusive, and financially viable; are there any best practices that can be studied and replicated to bring about faster growth in agriculture; does the prior hypothesis that rapid agricultural growth can alleviate poverty faster, reduce malnutrition, and augment farmers' incomes stand? To answer these questions, the book follows four broad threads -- i) Linkage between agricultural performance, poverty and malnutrition; ii) Analysing the historical growth performance of agricultural sector in selected Indian states; iii) Will higher agricultural GDP necessarily result in higher incomes for farmers; iv) Analysing the current agricultural policy environment to evaluate its efficiency and

efficacy, and consolidate all analysis to create a roadmap. These are discussed in 12 chapters, which provide a building block for the concluding chapter that presents a roadmap for revitalising Indian agriculture while ensuring growth in farmers' incomes.

Reader's Guide to the Social Sciences Jonathan Michie 2014-02-03 This 2-volume work includes approximately 1,200 entries in A-Z order, critically reviewing the literature on specific topics from abortion to world systems theory. In addition, nine major entries cover each of the major disciplines (political economy; management and business; human geography; politics; sociology; law; psychology; organizational behavior) and the history and development of the social sciences in a broader sense.

**Agricultural Value Chains in India** Ashok Gulati 2022-01-01 This open access book provides a clear holistic conceptual framework

of CISS-F (competitiveness, inclusiveness, sustainability, scalability and access to finance) to analyse the efficiency of value chains of high value agricultural commodities in India. It is based on the understanding that agriculture is an integrated system that connects farming with logistics, processing and marketing. Farmer's welfare being central to any agricultural policy makes it very pertinent to study how a value chain works and can be strengthened further to realize this policy goal. This book adds value to the existing research by studying the value chains end-to-end across a wide spectrum of agricultural commodities with the holistic lens of CISS-F. It is not enough that a value chain is competitive but not inclusive or it is competitive and inclusive but not sustainable. The issue of scalability is very critical to achieve macro gains in terms of greater farmer outreach and sectoral growth. The research undertaken here brings out some very useful insights for policymaking in terms of what needs to be done better to steer

the agricultural value chains towards being more competitive, inclusive, sustainable and scalable. The value chain specific research findings help draw very nuanced policy recommendations as well as present a big picture of the future direction of policy making in agriculture.

**The Making of Miracles in Indian States** M.

Govinda Rao 2015-04-01 Growth miracles typically have been studied at the country level. In *The Making of Miracles in Indian States*, internationally-renowned economists Arvind Panagariya and M. Govinda Rao bring together a team of six leading scholars to break from that tradition and study three growth miracles in

India at the level of the state: Andhra Pradesh, Bihar, and Gujarat. These are three large and diverse states in India: Gujarat has the third-highest per-capita income among the largest eighteen states, Bihar is the poorest, and Andhra Pradesh falls in the middle. Despite vast differences among the states, all three have grown at rates exceeding 8% for an entire decade in the twenty-first century. Each section of this three-part book offers a historical perspective on the state's development and the specific factors that improved its economic fortunes. The three case studies are backed by extensive quantitative documentation. They demonstrate the critical role that leadership, translated into improved policies and implementation, plays in stimulating growth and development. *The Making of Miracles in Indian States* is essential reading for students and scholars alike, as well as policy makers, NGO workers, and employees of international institutions.

Economic Reform in India Nicholas C. Hope  
2013-01-21 The essays in this volume are written by leading economists working on the Indian economy. They collectively emphasize the importance of policies and institutions for sustained growth and poverty reduction, stressing that the success of sector-specific policies is vitally dependent on the nature of markets and the functioning of institutions such as those charged with regulating and overseeing critical sectors. Individual contributions assess the role of Indian government policy in key sectors and emphasize the policies required to ensure improvements in these sectors. The first section discusses aspects of the macro economy; the second deals with agriculture and social sectors; the third with jobs and how labor markets function in agriculture, industry and services; and the fourth with infrastructure services, specifically electricity, telecommunications and transport. The essays are drawn from the most influential papers

presented in recent years on Indian economic policy at the Stanford Center for International Development.

### **An Inter-regional Trend Analysis of Agricultural Prices in India Since 1939**

Binoy Nath Verma 1980

Why Growth Matters Jagdish Bhagwati  
2013-04-09 In its history since Independence, India has seen widely different economic experiments: from Jawharlal Nehru's pragmatism to the rigid state socialism of Indira Gandhi to the brisk liberalization of the 1990s. So which strategy best addresses India's, and by extension the world's, greatest moral challenge: lifting a great number of extremely poor people out of poverty? Bhagwati and Panagariya argue forcefully that only one strategy will help the poor to any significant effect: economic growth, led by markets overseen and encouraged by liberal state policies. Their radical message has huge consequences for economists, development NGOs and anti-poverty campaigners worldwide.

There are vital lessons here not only for Southeast Asia, but for Africa, Eastern Europe, and anyone who cares that the effort to eradicate poverty is more than just good intentions. If you want it to work, you need growth. With all that implies.

### **Structural change, fundamentals, and growth : a framework and case studies**

McMillan, Margaret 2017-05-11

The Economy of Modern India B. R. Tomlinson 2013-04-25 Rapid economic growth has put India at the centre of current debates about the future of the global economy. In this fully revised and updated text, B. R. Tomlinson provides a comprehensive and wide-ranging account of the Indian economy over the last 150 years. He sets arguments about growth, development and underdevelopment, and the impact of imperialism, against a detailed history of agriculture, trade and manufacture, and the relations between business, the economy and the state. The new edition extends the coverage

right up to the present day, and explains how one of the largest countries in the world has sought to achieve economic progress and lasting development, despite institutional weaknesses, rigid structures of political and social hierarchy, and the legacy of colonialism.

**World Development Report 2009** World Bank 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number

a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

### India's De-industrialization Under British Rule

David Clingingsmith 2005 "India was a major

player in the world export market for textiles in the early 18th century, but by the middle of the 19th century it had lost all of its export market and much of its domestic market. Other local industries also suffered some decline, and India underwent secular de-industrialization as a consequence. While India produced about 25 percent of world industrial output in 1750, this figure fell to only 2 percent by 1900. We use an open, specific-factor model to organize our thinking about the relative role played by domestic and foreign forces in India's de-industrialization. The construction of new relative price evidence is central to our analysis. We document trends in the ratio of export to import prices (the external terms of trade) from 1800 to 1913, and that of tradable to non-tradable goods and own-wages in the tradable sectors going back to 1765. With this new relative price evidence in hand, we ask how much of the de-industrialization was due to local supply-side influences (such as the demise of the

Mughal empire) and how much to world price shocks (such as world market integration and rapid productivity advance in European manufacturing), both of which had to deal with an offset the huge net transfer from India to Britain before 1815. Whether the Indian de-industrialization shocks and responses were big or small is then assessed by comparisons with other parts of the periphery"--NBER website India's Villages in the 21st Century Surinder S. Jodhka 2019-09-05 Post India's economic liberalization in the 1990s, the village ceased to be central to ongoing sociological concerns. As a result, the period saw a marginalization of rural life and agrarian economy in the national imagination. However, in the 21st century as India transforms, so does its rural life. This book revisits the realities of contemporary rural India, exploring the trajectories of change across regions such as those in rural economies, the relationship of villages to the outside world, and the dynamics of caste inequalities. The volume

puts together 14 papers based on empirical studies carried out by sociologists, social anthropologists, and economists over the past 15 years to begin a holistic conversation on contemporary rural India which continues to be an important site of social, political, and economic activities. India's Villages in the 21st Century stresses diversity as a fundamental structure of Indian economy and society and illustrates the point by focusing on the economies, patterns of settlements, and organization of social and political life in India's villages.

**Trade, Investment and Economic Growth**

Pooja Lakhanpal 2021-05-10 The book

contributes to the growing literature pertaining to empirical and policy issues in international trade, foreign capital flows and issues in finance, implications for India and emerging economies related to trade and development interface, and analysis of sector level growth and development in India. Further, the focus is on the policy aspects of these themes and their role in fostering economic development in the context of India and other emerging market economies. The discourse focuses mainly on empirical work and econometric details. The relevant issues are investigated using state of the art techniques

such as gravity models, panel co-integration, generalized hyperbolic distributions, SEM, FMOLS and Probit models. In addition, detailed literature survey, discussions on data availability, issues related to statistical estimation techniques and a theoretical background, ensure that each chapter significantly contributes to the ever-growing literature on international trade and capital flows. The readers shall find an engaging dialogue on the crucial role played by policy and the trade-capital flows-growth experience of emerging economies. The book is relevant for those who are interested in contemporary issues in trade, growth and finance as well as for students of advanced econometrics who may benefit from the analytical and econometric exposition. The empirical evidences provided here could serve as ready reference for academicians, researchers and policy makers, particularly in emerging economies facing similar challenges.

### **Agriculture and economic transformation in the Middle East and North Africa: A review of the past with lessons for the future**

Nin-Pratt, Alejandro 2017-12-31 The agriculture sector is key for economic and social development, but the sector's potential has not received enough attention from policy makers and stakeholders in the Middle East and North Africa (MENA) region. Political transitions, instability, and the resulting refugee crisis have shifted focus away from other pressing development challenges, including slow progress in economic diversification, high unemployment, and persistent high food insecurity and rural poverty. Despite its small contribution to GDP, agriculture is strategic for sustainable development in the MENA countries. Agriculture, for example, is central to achieve food and water security in a region characterized as one of the most food insecure and water scarce in the world. The sector's role in employment is also central, given the region's

high structural unemployment. However, it will not be possible for MENA countries to develop agriculture without a pathway to structural economic transformation. The region has already started the process of transformation but longstanding challenges remain. This report aims to examine the drivers, constraints, and social implications of agricultural development in MENA and to explore possible cornerstones for new and sustainable development strategies in the context of economic transformation. More specifically, the report provides answers to the following questions: • What development strategies and policies did governments in MENA put in place over the past three decades and how did they affect the performance of agriculture? • How did the structural characteristics of the MENA countries affect agricultural development and the economic transformation process in the region? • What did we learn from the past performance of agriculture? What should be the central

elements guiding future agricultural policies? •  
What are elements of a new and sustainable development strategy in MENA countries? •  
What is the role of agriculture and agro-industries for development in MENA?

**Agricultural productivity, inter-sectoral labor shift, and economic growth in India**  
Balaji, S. J. 2020-06-29 In this paper, we study the transformation process Indian agriculture exhibited in the recent past, studying its policy implications. Between the years 2005-06 and 2015-16, more than 52 million workers left agriculture, which did not have any effect on agricultural output due to productivity improvements. We estimate the contribution of productivity growth and structural change in agriculture to national productivity growth during 1981-2016. We estimate differentials in

agricultural productivity and in their ability to contribute to the structural change process for 21 major states of India. Using revised employment estimates, we trace major changes during the pre-reforms (before 1991) and post-reforms periods. Results show that in the pre-reforms period, the impact of productivity improvements in agriculture on agricultural output was equated by the new workforce entering into this sector, leading to a stagnant labor productivity trend. The labor-shift from agriculture during the early years of the post-reforms period, which increased further in the next decade, has led to a consistent rise in agricultural productivity. In the absence of reforms and the associated labor shift, the productivity growth in Indian agriculture would have been much lower. A similar labor shift during the last decade has not affected agricultural output, which has risen more rapidly. This result holds true for almost all states studied. There exists a positive relation

between labor-shift and agricultural output in a cluster of states. Decomposition results indicate 'within-sector' productivity growth is the major source of overall growth, with a rising contribution of 'structural change'. Studying the sources of growth across states offers new scope to achieve inter-sectoral productivity convergence.

### **Uneven Development in the Third World A.**

Bhalla 1996-11-26 The book defines uneven development in terms of development strategies and their outcomes. Drawing on case-studies from China and India, three types of strategy are discussed: heavy industrialisation, sectoral/regional balance, and economic liberalisation. Also three kinds of outcomes are examined: growth of output and productivity, income, consumption and class inequalities in three spatial dimensions - intra-regional, inter-regional and rural-urban. Furthermore, access to and utilisation of technology, health and educational services are compared.

**Reforming Indian Agriculture** Sankar Kumar Bhaumik 2008-08-05 This compilation includes original essays that examine past and current status of the agricultural sector in India and delineate the challenges it faces in the era of economic reforms. It highlights the issues that are beginning to raise serious policy discussions in India in view of continuing agrarian crisis and the Eleventh Five Year Plan (2007-2012). Apart from providing macro level analyses, the collection also features studies which are based on micro (field) data that reflect the realities of the Indian agrarian economy. In addition, **Reforming Indian Agriculture: Towards Employment Generation and Poverty Reduction** focuses on the issues of employment, poverty, food and nutrition, and reviews other aspects of development policy like fostering inter-state cooperation for optimum utilization of resources, privatization policy to mobilize funds for social sector development and pattern of adoption of improved technologies by small scale industries

in the country. The book will be invaluable for students, researchers and academicians working in the fields of Development Economics, Rural and Agricultural Economics, and Development Policy Analysis.

**Exports to Jobs** Erhan Artuc 2019-02-25 South Asia has grown rapidly with significant reductions in poverty, but it has not been able to match the fast-growing working age population, leading to lingering concerns about jobless growth and poor job quality. Could export growth in South Asia result in better labor market outcomes? The answer is yes, according to our study, which rigorously estimates—using a new methodology—the potential impact from higher South Asian exports per worker on wages and employment over a 10-year period. Our study shows the positive side of trade. It finds that increasing exports per worker would result in higher wages—mainly for better-off groups, like more educated workers, males, and more-experienced workers—although less-skilled

workers would see the largest reduction in informality. How can the benefits be spread more widely? Our study suggests that scaling up exports in labor-intensive industries could significantly lower informality for groups like rural and less-educated workers in the region. Also, increasing skills, and participation of women and young workers in the labor force could make an even bigger dent in informal employment. The region could achieve these gains by: (i) boosting and connecting exports to people (e.g., removing trade barriers and investment in infrastructure); (ii) eliminating distortions in production (e.g., by more efficient allocation of inputs); and (iii) protecting workers (e.g., by investing in education and skills).

*Economics of the Food Processing Industry* Debdata Saha 2020-03-14 This book presents a wealth of perspectives on studying the manufacturing end of food processing industries, with a special focus on regions with a low industrial base and multiple missing markets,

institutional finance being the most prominent example. Positioning food processing within the industrial ecosystem, which includes entrepreneurs, policymakers, business consultants and associations, the study first considers three different trajectories: for developed economies, for national territories like India, and for sub-national regions like Bihar. In turn, it shows how these trajectories intertwine in two dimensions: the region and the sub-sector. Successfully completing food-processing projects in any of these trajectories requires the identification and development of appropriate product networks that link basic processed items with advanced ones through a chain of value addition. Moreover, the supply-side narrative presented here identifies two types of costs: physical and non-physical costs of operation. For trajectories with skewed firm sizes (“missing middle”) and missing markets, which can be found in Bihar, the latter costs matter just as much as the former in terms of

entrepreneurship. While efficiency in operations is studied for selected sub-sectors in Bihar’s food processing to assess the main sources of inefficiency in minimizing the physical costs of operations, non-physical costs are studied using the construct of region-based counterfactual thinking (rCFT) and its relationship with the perception of risk for entrepreneurs. rCFT offers a new concept for understanding the mindset of the entrepreneur, in which the regional identity plays a significant role. The empirical content is based on a primary survey of food processing in Bihar. Additional policy questions, such as the choice between spatial collocation of food parks or cluster-based development of unique sub-sectors, are explored through an analysis of the policy network that supports entrepreneurship. Issues arising from the government’s policy choices, particularly vertically targeted industrial policies, can influence industrial outcomes and are particularly relevant for regions like Bihar. While policy evaluation for

Bihar's processed food industry yields insights on policy targeting for decision-makers in the government, examples of parallel narratives from global experiences in comparable regions shed new light on industrial development in processed food, which should be of interest to business practitioners, academic researchers and policymakers alike.

Inclusive Growth and Development in India Y.

Tsujita 2014-08-22 India is one of the fastest growing countries in the world. However, high economic growth is accompanied by social stratification and widening economic disparity between states. This book illustrates some important aspects of underdevelopment and the process by which the underclass is left behind by focusing on the country's most neglected regions.
