Autumn Colors of Kyoto Kodansha International 2014-10-24 Why are the autumn colors of Kyoto described as the most beautiful in Japan? The delicate, almost translucent autumn hues, which derive from the city's unique plant life and climate, are undoubtedly lovely to behold, but clearly that is not the only reason. The secret of Kyoto's autumn beauty lies in a perfect harmony of the natural and the man-made, the culmination of centuries of history. This book introduces 49 magnificent Kyoto locations—predominantly temples and shrines—ideal for viewing the season's fiery displays. The scenes are elegantly captured by three photographers who have devoted their lives to conveying the beauty of this remarkable city through the camera lens. In these pages, readers will soon note that far from being consigned to history, Kyoto's ancient places of worship are assiduously maintained as centers for present-day religious devotions. The ideal, seamless coexistence of these quintessential Kyoto landmarks and their surroundings is another secret of Kyoto's seasonal beauty, and the key to the city's position as Japan's cultural capital for over 1,200 years. A bilingual map section provides address information and contact details for each location.

Water and Ritual Lisa J. Lucero 2009-07-21 In the southern Maya lowlands, rainfall provided the primary and, in some areas, the only source of water for people and crops. Classic Maya kings sponsored elaborate public rituals that affirmed their close ties to the supernatural world and their ability to intercede with deities and ancestors to ensure an adequate amount of rain, which was then stored to provide water during the four-to-five-month dry season. As long as the rains came, Maya kings supplied their subjects with water and exacted tribute in labor and goods in return. But when the rains failed at the end of the Classic period (AD 850-950), the Maya rulers lost both their claim to supernatural power and their temporal authority. Maya commoners continued to supplicate gods and ancestors for rain in household rituals, but they stopped paying tribute to rulers whom the gods had forsaken. In this paradigm-shifting book, Lisa Lucero investigates the central role of water and ritual in the rise, dominance, and fall of Classic Maya rulers. She documents commoner, elite, and royal ritual histories in the southern Maya lowlands from the Late Preclassic through the Terminal Classic periods to show how elites and rulers gained political power through the public replication and elaboration of household-level rituals. At the same time, Lucero demonstrates that political power rested equally on material conditions that the Maya rulers could only partially control. Offering a new, more nuanced understanding of these dual bases of power, Lucero makes a compelling case for spiritual and material factors intermingling in the development and demise of Maya political complexity.

Northern Hemisphere Cloud Cover for Selected Late Fall Seasons Using TIROS Nephanalyses Philip F. Clapp 1968 Northern Hemisphere fields of mean cloudiness were constructed using TIROS nephanalyses for the late-fall seasons (Oct. to Dec.) of 3 years, 1962-64. These may be useful in studies of cloud climatology and year-to-year variations of the earth-atmosphere heat budget; and for designing and testing cloud-modeling procedures in numerical experiments. Shortcomings were revealed in the present subjective nephanalysis documentation which hopefully will soon be corrected by the promising work now going on in digitizing the video pictures.
