2013-04-17 We try in this book

to provide a detailed but

readable, technical but

accessible monograph on

energy in the United States.

We treat energy as a

multidisciplinary challenge and

apply the standard tools of

economists, physicists,

engineers, policy analysts, and,

some might claim, fortune

tellers. We hope that it will be

used in classrooms of various

types, and read by the general

reader as well. That increased

energy efficiency should be the

first priority of energy

policymakers is a conclusion,

not an assumption, of our

analysis. Many analysts have

arrived at this conclusion while

working separately on energy

supply problems. The

magnitude and scope of supply

problems, primarily problems

of high prices and

environmental costs, lead one

inexorably back to reducing

demand growth as the first,

most important step in any

plausible energy future. We

examine, in some depth, why

much of the past literature on

energy still points, fallaciously

in our opinion, to high energy

futures. This is in Part I (called

"A Short History of the

Future"). We devote one-third

of the book (Part II) to energy

resources, their internal and

external costs, and the

quantities of energy to be

derived from these resources.

This analysis provides a

context within which the

economic and social value of

energy conservation options

can be assessed.

Arkansas Archaeology Robert

C. Mainfort 1999-11-01

Arkansas has long been recognized as a state with a rich archaeological heritage that is unsurpassed in North America. The Toltec Mounds were made famous by the Smithsonian's research at the turn of the century. The Sloan site, dated to 8500 B.C., is the oldest documented burial ground in the New World. The alluvial plain of the central Mississippi River valley supported perhaps the greatest prehistoric urban population. And the Parkin site has yielded important information about the de Soto incursion into the continent. This festschrift recognizes the contributions made in researching this varied

heritage by Dan and Phyllis Morse from the inception of the Arkansas Archeological Survey in 1967 to their retirement in 1997. The essays were prepared by thirteen of their colleagues, recognized experts in archaeology and related fields, and represent state-of-the-art knowledge about Arkansas's archaeology. The topics range broadly: from prehistoric environments and regional syntheses to specialized studies of specific culture periods and historical archaeology. Paul and Hazel Delcourt and Roger Saucier provide a chapter that will serve as a standard reference for many years on Holocene environments; Chris Gillam's contribution demonstrates the utility of Geographic Information Systems in broad-scale pattern analysis; Robert Mainfort uses large collections of ceramics to show that traditional methods for grouping Late Mississippian sites are insufficient; Michael Hoffman introduces a new line of evidence from old newspaper accounts; and

Frank Schambach, in reinterpreting the spectacular Spiro site in eastern Oklahoma, gives us a powerful, classic example of archaeological and ethnohistoric interpretation. This volume will, of course, be of great interest to professional archaeologists and anthropologists, but the essays are also accessible to students, amateur archaeologists, historians, and enthusiastic general readers. As the new millennium dawns, this book celebrates the legacy of two very distinguished careers in archaeology and heralds the proliferation of innovative new approaches and techniques for the continuing study of Arkansas's prehistoric peoples.

Boxes, Rockets, and Pens

Doug Markham 1997 Boxes, Rockets, and Pens - the title refers to equipment used in the recovery and relocation of wildlife - presents a detailed history of the efforts to restore several of Tennessee's wild animals from near extinction. Drawing from his own firsthand observations of the state's recent wildlife history and from interviews with wildlife professionals, Doug Markham offers a series of vignettes on key recovery programs. Complementing the narrative are nearly one hundred black-and-white and color photographs, including many by the renowned nature photographer Byron Jorjorian.
