Seashore Life of Southern California Sam Hinton 1987 The dry land is one world and the wet sea is another, but the line separating them is ever-changing. Known as the intertidal zone, the area between the land and the sea is defined by the extremes of the tides. Sam Hinton provides an introduction to this fascinating zone and its contiguous waters and to some of the many creatures who make the southern California seacoast their home. This highly readable book has been for many years the handiest resource available for anyone wanting to explore that region's delights and mysteries. The book is filled with interesting anecdotes and drawings and has a thorough discussion of the natural forces—the tides, winds, storms, currents, surf, and ocean chemistry—that affect near-shore animals. Also included is a section relating the ocean forces to the intertidal habitat, along with a map of southern California locations where one might observe the organisms described in the book.

Terrestrial Vegetation of California, 3rd Edition Michael Barbour
2007-07-17 "This completely new edition of *Terrestrial Vegetation of California* clearly documents the extraordinary complexity and richness of the plant communities and of the state and the forces that shape them. This volume is a storehouse of information of value to anyone concerned with meeting the challenge of understanding, managing or conserving these unique plant communities under the growing threats of climate change, biological invasions and development."—Harold Mooney, Professor of Environmental Biology, Stanford University "The plants of California are under threat like never before. Traditional pressures of development and invasive species have been joined by a newly-recognized threat: human-caused climate change. It is essential that we thoroughly understand current plant community dynamics in order to have a hope of conserving them. This book represents an important, well-timed advance in knowledge of the vegetation of this diverse state and is an essential resource for professionals, students, and the general public alike."—Brent Mishler, Director of the University & Jepson Herbaria and Professor of Integrative Biology, University of California, Berkeley
